Chall 1

Find the compiler version of `mame0240` by looking at the strings in the binary and reproduce a build as close to the original as possible.

```
$ make SOURCES="src/mame/drivers/astrocde.cpp,
  src/mame/drivers/carpolo.cpp,
  src/mame/drivers/circus.cpp,
  src/mame/drivers/exidy.cpp,
  src/mame/drivers/goldnpr.cpp,
  src/mame/drivers/gridlee.cpp,
  src/mame/drivers/looping.cpp,
  src/mame/drivers/starfire.cpp,
  src/mame/drivers/supertnk.cpp,
  src/mame/drivers/vertigo.cpp,
  src/mame/drivers/victory.cpp,
  src/mame/drivers/williams.cpp,
  src/mame/drivers/wrally.cpp" REGENIE=1
```

Then by `bindiffing` the two binaries you can see that there are quite some diffs in a function that calls `system`.

```
N = [0]*15
N[1] = "E3F5F2ECA0ADEBA0ADF3A0E8F4F4F0F3"
N[2] = "BAAFAFE6E9ECE5F3E8E1F2E5AEE6F2AF"
